

# PANEL 5 - MILITARY FAMILIES AND TRANSITIONAL STRESS: WHAT CRITICAL INFORMATION IS MISSING?

Mark Glauser

Professor Department of Mechanical and Aerospace Engineering  
Associate Dean for Research and Doctoral Programs,  
LC Smith College of Engineering and Computer Science  
Syracuse University

Military Families in Transition: Stress, Resilience and Well-being  
September 17-18, 2013  
Walter Reed Army Institute of Research  
Silver Spring, Maryland

# Thoughts

- Everything should be tied to the warfighter mission!
- Use systems ID approaches (i.e., based on empirical data) to generate adaptable dynamical systems models for understanding, prediction and control (e.g. via intervention)... Modern tools for dealing with complex high dimensional non-linear systems.
- What are the  $O(1)$  issues(s)? i.e., what are the most important issues from all we have heard over the last couple of days?
  - I might argue that they should be closely linked to the following question: How do we impact in a positive way the most military families in transition as quickly as possible?
- Perhaps a “Core Competency” framework might make sense for sorting out these issues.
